```
 1 public class Task1{  // Template 1
 2 public static void main (String args[]){
 3    while (event.handle()!=null){
 4       for each object { // if object is of some other type,
 5                          // multiple classes are involved.
 6          object.respond();
 7       }
 8    }
 9 }
10 }
11
12 public class Task2{  // Advanced model with exception, and other tech.
13 public static void main (String args[]){
14    while (1){
15       Event event.catch(); // or catch the exception
16       for each object { // if object is of some other type,
17                          // multiple classes are involved.
18          object.respond();
19       }
20    }
21 }
22 }
23
24
25
```
