CIS 5636 Ad Hoc Networks

- **Course Description**:

Ad Hoc Networks. Credit 3. A comprehensive approach to fundamentals of ad hoc networks including media access protocols, routing protocols, implementation and communication performance. Prerequisite: Discrete Mathematics and Introduction to Data Communications.

- **Textbook**:

J. Wu, Theoretical and Algorithmic Aspects of Sensor, Ad Hoc Wireless, and Peer-to-Peer Networks, CRC Press, 2005.

Classnotes and handouts

- **References**:

Conference proceedings:INFOCOM, MobiCom, MobiHoc and SenSys

- **Instructors**:

Jie Wu, Chair and Laura H. Carnell Professor

304A SERC, 215-204-8450, jiewu@temple.edu

- **Office Hours:**

Wu: Wednesday, 3:00 – 5:00 pm

- **Goals:**

An understanding of basic of the ad hoc wireless networking. Covers media access, routing, data management, power optimization, transport protocol, and much more. Current and future developments in the field.

- **Prerequisites by Topics:**

  1. Basic graph theory
  2. Fundamentals of computer networks

- **Topics:**

  1. Introduction to Wireless Networks
  2. Ad Hoc Wireless Networks and Their Origins
  3. Topics in Infrastructured Networks (3G and 4G)
     - Handoffs
     - Location Management and Localization Service
     - Channel Assignment
     - Cognitive Radio
  4. Topics in Infrastructurless Networks (MANETs)
     - Wireless Media Access Protocols
     - Ad Hoc Routing Protocols
     - Multicasting and Broadcasting
     - Information Propagation
     - Data collection, aggregation, and compressive sensing
     - Coverage, Reliability, and QoS
     - Power Optimization
     - Capacity
     - Security
     - Network Coding
  5. Applications
     - Sensor Networks and Indoor Wireless Environments
     - Pervasive Computing
     - Peer-to-Peer Networks
     - Delay Tolerant Networks
     - Social Networks
  6. Sample On-going Projects
